Dell latitude d830 cpu upgrade

Upgrading Latitude D830 to Nvidia Quadro Our IT Department has just purchased our Latitude D830 but did not order the requested 256 MB Nvidia Quadro video card and we have the onboard graphics instead. Is it possible to buy Nvidia Quadro cards and install it on our existing laptops? Equium L20-264 - CPU upgrade Hello world I have Toshiba Equium L20-264 and I want to move into gearCan someone help me please? I had already upgraded to 2 GB of Ram, but my CPU is still 1.4 GHz. Please guide me what to do and if it supports several Ghz processor, which will be the best place to buy. Thank you. I assume that you have not read all the posts here in the forum about upgrading the CPU s for laptop?Did you? Some facts first:Update CPU is very delicate and depends on the chipset and BIOS support.In case one of the parties (chipset or bios) would not support new CPU, the will to power laptop on. Second: the laptop seems to be equipped with an Intel Celeron - M CPU, and I suppose the other Intel Celeron-M CPU be compatible:Intel Celeron M 370 (1.5 Ghz)Intel Celeron M 380 (1.6 Ghz) Everything supports the FSB 400 Mhz But guess what? Even if you add the new processor at 1.6 Ghz, the performance gain will be not noticeable. So in my eyes, CPU upgrade for this old book is useless. It won't add any performance benefits. Satellite Pro L630 - 14L - CPU upgrade possible? Is it possible to upgrade processor in this model: L630 14 L? If yes what processors are supported?Another question - my hdmi port stopped working - is the possible replacement? Hello With regard to the question on the CPU upgrade:This question was asked several times here in the forum. I recommend you read the other discussions on upgrading the CPU. Usually, the case is simple: the manufacturers of portable don't support this upgrade for clean products. The CPU is delicate because the new processor must be based on two essential elements: chipset and BIOS. The laptop supports the Mobile Intel HM55 Express Chipset.So, you know, what would the CPU supported by the chipset.But like I said above: the BIOS support is also important and finally everything depends on the BIOS whether your new processor works or not. Qosmio G40 - 10Z - possible CPU upgrade? What processor can I put my Qosmio G40 - 10Z? I couldn't find a list and the motherboard is a "motherboard Toshiba" without a template or similar.I would like to change to a better processor, a quadcore would be well, is - it possible? My Windows 7 tells me to change the battery, but the battery is ok. Google says its due to Windows and could be solved by the BIOS updated. I have the newestOfficial home page. There is no latest BIOS available? Thank you Robert Hello I doubt that the CPU upgrade would be possible. You should read this article: This error message is it exactly that you get Windows 7? Normally you get only a low battery notification, you need to Exchange or connect the power supply. Satellite Pro L450D - 12 X - CPU upgrade Hello I have a Toshiba Satellite Pro L450D - 12 X and I was wondering which processors 'Dual Core' support this laptop for a CPU upgrade? Have a read of other peoples threads, it is possible for the laptop to have an upgrade, but I'm not sure of what those who actually support. The most common dual core would be the dual core 'Stalk' However, there are many processors that go under the name "stalk". I was also wondering if all Toshiba L450Ds have the same motherboard etc... because they contain the same case and (mostly) graphics card Thank you very much I assume that you have already read this Toshiba doesn't support CPU upgrade and a public document on processors compatible doesn't exist.You can just hope that someone has an identical identical machine with the hardware platform and can offer some info on these updates. For best performance, you can start with the RAM upgrade. Have you upgraded RAM to max level? On Satellite C670 - 17 M CPU upgrade I have laptop: * SATELLITE C670 - 17 M *.My processor: Pentium (r) CPU B950 of * Intel (R) @ 2.10 GHz, 2100 MHz *.My Chipset is: * Mobile Intel® HM65 Express Chipset *. So, if you look at and click on * compatibility * you can see all the compatible processors that you can use with this chipset right? My question is, can I upgrade my current processor with all of the processors on this list? Toulouse, Republic of Korea > My question is, can I upgrade my current processor with all of the processors on this list? Probably yes.But the fact is that no one would be able to answer this question because this CPU upgrade isn't officially supported. This means that gift of manufacturers of mobile phone t provide any information on this upgrade and compatibility. You can try these updates with your own hands and hope that the BIOS would be able to manage this new CPU. Satellite C850-1 kN and CPU Upgrade I recently got my hands on one of these laptops. It has a Pentium 960 b for the moment, but I searched for Intel i3 - 3110M or Intel i3 processor - 3130M CPU on eBay to replace the slower Pentium. Both are IvyBridge, identical to the original and both have a TDP of 35W, which means that they should not belt any more heat it does (or at least no more than the fan can handle, because the fans are usually designed to be mass produced and used in many different laptops (, but the same form factor) Someone had a bit of luck the upgrade of their CPU in Toshiba laptops? I guess I'm of the same generation of processor Intel should mean support BIOS already integrated into the planks of the BIOS... I can tell you that a lot of people have been able to upgrade the processor in their notebooks of Toshiba but fact is simple as this upgrade isn't officially supported by laptop manufacturers and can be done at your own risk.Generally the CPU upgrade depends on chipset and BIOS support. The laptop supports the Mobile HM70 Express Chipset Intel - compatible and supported processors are Intel ARK page in compatible products section: To be honest I don't think that all compatible CPUs are but it s a good start point. However, the BIOS must support also the new processor and maybe it's the thorny question since no one knows what are the processors supported by the BIOS because this information isn't out of nowhere. Satellite C650D - issue CPU upgrade I have a 003 C650d with an e - 240 single core AMD and I was wondering if I could swap for a duel AND 1.5 kernel? Just for your info: Generally the CPU upgrade is not supported due to the performance of the cooling system. G6-1262sa Pavilion: Pavilion g6-1262sa CPU upgrade v2, Sandy Bridge = > Ivy Bridge? Hi, thanks to the Pavilion g6-1262sa maintenance and manual cleaning and this great forum, I recently discovered that replace my i3-2330 m is possible with all sandy bridge i7 2620m processors. These questions may sound silly, but I continued my research and I have more ideas to confront reality as a couple. I realize that the compatibility is not only matter of editing the same socket, but also of the bios installed on certain motherboard, however: 1. do you think it would be possible to Exchange Sandy Bridge (2nd generation) i3 - 2330 m for some Ivy Bridge (3rd generation) i5-3210 m? 2 is the 32nm to 22nm manufacturing technology enough difference on its own (even if the rest of the architecture is the same) to prevent that to work? 3 is the bios from my card mother g6 identifying somehow installed processor? (if this isn't on 'the list' it simply won't work? "or what technical compatibility issue? According to some statements which I found it on some forums and sites (and a few facts documented free): Socket: the two processors are compatible with BGA1023 decision-making. (at least that's what I found, if someone could confirm I would be grateful) Difference of architecture: "The 3rd generation is called 'Ivy Bridge' and is essentially a copy of Sandy Bridge made on a smaller scale, or die." However, Intel also focused on beefing up of the onboard graphics in this generation. » TDP: both are 35 W Carrots: both are 2 physical (Virtual 4 - thanks to hyperthreading I guess?) Energy consumption: "Ivy Bridge CPUS also use less energy", "Ivy Bridge consumes less energy: around 10w, I think. » Temperature: i5-3210 m going 5 * C more - 2330 m - i3 shouldn't make much difference Looking forward to some responses, RacA It is not a technical incompatibility (socket) because as you probably know Ivy Bridge and Sandy Bridge are backward compatible on most motherboards desktop. However, HP has only implemented gen 2d, processor Intel Core compatibility of the HM65 Express chipset that you a. motherboards supporting 3rd gen processors use the HM77 chipset. There is no another motherboard that will fit in your frame. Your analysis above, which was pretty good, left out the chipset, which you must always remember when assessing the possibilities of upgrade: 28chipssets%29/HM65_Express.html The HM65 supports a couple 3rd gen processors, but none of them are on the list of HP for your model. You can try one of those shown in the link I gave, but I think that there is a small chance that they will work. If it's 'the Answer' please click on 'Accept as Solution' to help others find it. Satellite M60 - issue CPU upgrade Hello out there! I am a happy owner of a Satellite M60.I recently installed Win7 pro and nothing works well. I was offered a new processor Intel M770 andnow, I would like to hear if anyone has any experience changin processor in a laptop. The M770 have on the same specsas M740 and executes the same 915 chipsets. M770 has a 2.13 Ghz clock and the M740 1.73 revival. If I swap the processors, my laptop will get faster, or it will explode like a hurricane and disappear into a smokecloud? Best regardsMogens > The M770 have on the same specsas M740 and executes the same 915 chipsets. M770 has a 2.13 GHz clock and the M740 1.73 revival. Well, generally the CPU upgrade is a really complicated because of the compatibility of the BIOS history, but I think you have a good chance to get the laptop working with new CPU M770. It belongs to the same family of CPU as the old CPU and chipsets support is the same.In addition, I think that this laptop overheating not using this CPU of course there is more the dissipation of heat thanks to the fastest performance, but I think that the cooling modules should handle this Of course, it s just my opinion personal and everything what you would do is at your own risk. Good luck Satellite M30X-113 - CPU Upgrade Hello I have a [Intel Pentium M Processor Ghz 725 1.6 | I want to know if my laptop is able to support this CPU [Intel Pentium M Processor 765 2.10 GHz | and if it's worth in terms of performance? I also have the latest version of the v2.0 of BIOS published on 02/11/09. I am also aware that in General CPU upgrade is not supported and not recommended. Thanks for your response Post edited by: oiproc Hello Theoretically, the new Intel Pentium M Processor 765 2.10 GHz should be compatible with the motherboard, but the fact is that nobody can say if the laptop would be working properly after this upgrade. One of the main problems could be the heat dissipation. Stronger CPU develops more heat, and this may affect the functionality of the laptop.In addition the BIOS was not configured for other processors so it could be a problem. Last but not least as mentioned in the article of Toshiba, the upgrade of the CPU is not supported!. So everything can be done simply at your peril! Satellite Pro L20-PSL25E - CPU upgrade question Hello I upgraded the ram last year and im running high-performance for my model, 2.0 GB. This really helped for awhile, but after a few heavy programs have been installed this year (only one software, one game) ive noticed it running slow as before, its worth noting that my computer has adopted all the necessary specifications for both outside the game where im working on 1.7 ghz and it needs the least 2.0 ghz processor, and I'm short on speed slowest performance of the game itself. The vehicle has currently a centrino pentium, keeping in mind a new portable computer is not in my budget, is it worth getting a new processor and which would be best? Thanks again, Rebecca. Hello My personal opinion is that Satellite L20 is not designed for heavy operations and is certainly not game machine. If you compare the price of Satellite and Satellite L laptops you'll understand why. I'm sure that this laptop is designed for Internet, office and simple every day activities. Upgrading RAM is very good and I'm sure it helps a lot but CPU upgrade is not the solution. Update CPU is not supported. You must also understand that each hardware platform is designed for optimal physical activity. Processor, graphics, cooling system and other hardware components must work without overheating and harmonic. Stronger CPU means more heat. In my opinion you should optimize operating system preinstalled software hoping you use will work better and more stable. Bu the way: Qosmio F50 - 10G CPU Upgrade im going to get my laptop upgrade Here it is:[: 055260 #0] (includes a PM45 Express Chipset) also have this adapter (120W) | After all, quad Q9100 is suitable for me? [2812M-Cache-2.26-GHz-1066-MHz-FSB%29] additional question, my old cpu is P8400 (25W) but Q9100 is 45W TDP. Power increase (+ 20W) affect my laptop? (reach saturation point) or in any case (incompatibility of socket etc..) and finally, if it is not compatible, you should be of down (it should be P8400) | Before starting to discuss CPU upgrade can you please check you already seen this document but just for your info. Please be so kind and tell us why you want to upgrade CPU? I ask this question because we are discussing here on mobile units and because of the particular and specific cooling system design these upgrades are not supported and not recommended. Are the reason of laptop performance for your decision to upgrade? Satellite A300 PSAGCE CPU upgrade I want to spend the CPU on my Satellite A300-PSAGCE. BIOS 2.20. Now I have Core 2 Duo CPU T5800 @ 2.00GHz - PPGA478 (Socket MPM45 (review / Stepping 07 / B3) ← Intel 82801IM ICH9M (review / Stepping 93 / A3) Website of Intel - Compatible processors Intel® Core 2 Extreme QX9300 processor (Cache 12 MB, 2.53 GHz, 1066 MHz FSB)Intel® Core 2 Duo T9800 CPU (2.93 GHz, front side bus at 1066 MHz, 6 MB Cache)Intel® Core 2 Duo Processor T9900 (3.06 GHz, front side bus at 1066 MHz, 6 MB Cache)Intel® Core 2 Duo P9500 processor (6 M Cache, 2.53 GHz, 1066 MHz FSB)Intel® Core 2 Duo processor P9600 (6 M Cache, 2.66 GHz, bus front-end to 1066 MHz)Intel® Core 2 Duo P9700 processor (6 M Cache, 2.80 GHz, 1066 MHz FSB)Intel® Core 2 Duo processor T9550 (2.66 GHz, front side bus at 1066 MHz, 6 MB Cache)Intel® Core 2 Duo T9600 processor (6 M Cache, 2.80 GHz, 1066 MHz FSB)Intel® Core 2 Duo processor P8800 (3 m Cache, 2.66 GHz, bus front-end to 1066 MHz)Intel® Core 2 Duo P8600 processor (3 m Cache, 2.40 GHz, 1066 MHz FSB)Intel processor Core 2 Duo P8700 (3 m Cache, 2.53 GHz, 1066 MHz FSB)Intel® Core 2 Duo processor P7570 (3 m Cache, 2.26 GHz, 1066 MHz FSB)Intel® Core 2 Duo P8400 processor (3 m Cache, 2.26 GHz, 1066 MHz FSB)Intel® Core 2 Duo processor T6670 (Cache 2 MB, 2.20 GHz, 800 MHz FSB)Intel® Core 2 Duo processor T9400 (2.53 GHz, front side bus at 1066 MHz, 6 MB Cache)Intel® Core 2 Extreme Processor X 9100 (3.06 GHz, front side bus at 1066 MHz, 6 MB Cache)Intel® Core 2 Quad processor Q9100 (2.26 GHz, 1066 MHz FSB, 12 MB Cache) What models of CPU 2.20 BIOS supports? Generally support Toshiba doesn't CPU upgrade, so before we start discussion about control CPU upgrade follow document Toshiba at first -
